

Goondiwindi Regional Council invites submissions under s228 of the *Local Government Regulation 2012* for the following:

Reference	Description
RFT-2425/20	Small Council Waste to Energy Feasibility Study

Our Council is focused on developing solutions that add value to its waste streams and provide waste to energy solutions for the broader region.

Goondiwindi has a significant bioenergy resource potential. However, there is insufficient clarity and detail over the viability and sustainability of these resources or appropriate technology solution to achieve the best outcome for the region.

Goondiwindi Regional Council seeks to engage a consultant with extensive experience to ensure a robust and comprehensive feasibility study is developed to inform council on the best approach for future waste management. This will provide efficiencies and cost savings to local businesses and residents, including Council.

Tender documents are available on VendorPanel, which can be accessed via Council's website [Current Tenders – Goondiwindi Regional Council \(grc.qld.gov.au\)](https://www.grc.qld.gov.au).

The **closing time for lodgement** of tender submissions is 12 Noon on Friday, 13 September 2024.
